

**MAP 9 - NATIONALLY & STATE LISTED THREATENED FLORA SPECIES
IN THE NORTHERN NRM REGION**

NRM North Map Description	
NAME	NATIONALLY & STATE LISTED THREATENED FLORA SPECIES IN THE NORTHERN NRM REGION
Date Source/s	Natural Values Atlas Threatened Flora Download (2 November 2007, DPIW)
Description and Uses Summary	<p>This map shows threatened species locations within NRM North. The data is sourced from the Natural Values Atlas, which provides authoritative, comprehensive information on Tasmania's natural values. This dataset is maintained and updated as required. Information on the dataset can be found at https://www.naturalvaluesatlas.dpiw.tas.gov.au. This threatened fauna species information is important as both national and state listed species are subject to legislative protection.</p> <p>Listed threatened species fall into 4 categories at the State level. These are extinct, endangered, vulnerable and rare. At the national level the species are listed as extinct, critically endangered, endangered and vulnerable. Locations for extinct species are not shown on the map.</p> <p>The region contains an estimated 339 threatened flora species. The region is rich in threatened flora species, particularly orchids, daises and peas; grassy ecosystems; and forests on gravels in the Midlands. There are also a number of species confined to highly mineralised rocks near Beaconsfield.</p>
