

MAP 1 BOUNDARIES FOR THE NORTHERN NRM REGION

NRM North Map Description																																																																				
NAME	BOUNDARIES FOR THE NORTHERN NRM REGION																																																																			
Date Source/s	NRM Region and Sub Region Boundaries, Integrated Marine and Coastal Regionalisation of Australia (IMCRA) v4.0 - Meso-scale Bioregions (DEH, 2006), Interim Biogeographic Regionalisation for Australia Version 6 (IBRA 6.1) (DEH, 2007).																																																																			
Description and Uses Summary	<p>The map shows important boundaries for statistical analysis and target setting for the region. The region includes coastal waters to the 3 nautical mile limit (approximately 5.5 km).</p> <p>The Northern NRM Region contains six sub regions and includes the majority of the NAP region (71%). Bioregions are large-scale biologically distinct units for which biodiversity condition targets can be set. There are nine bioregions in Tasmania, six of which occur at least partly in the northern region. Within the coastal water (including larger estuaries), four marine bioregions are shown: Boags, Freycinet, Flinders & Twofold Shelf.</p> <p>Figures below have been rounded to the nearest 100 hectares. The total land area varies from data set to data set as many of the State's data layers only include the large islands in the Furneaux group and coastal boundaries may differ. IBRA calculations include large estuarine regions (e.g River Tamar). The coastal waters and outer islands figures have been rounded to the nearest 1000ha.</p>
