

**MAP 13 - INDICATIVE STORAGE CAPACITY OF FARM DAMS BY  
SUB-CATCHMENT UNIT FOR THE NORTHERN REGION**

NRM North Map Description	
NAME	INDICATIVE STORAGE CAPACITY OF FARM DAMS BY SUB-CATCHMENT UNIT FOR THE NORTHERN REGION
Date Source/s	Farm dams database, Water Resources, DPIW (obtained July 2008)
Description and Uses Summary	<p>DPIW is collecting farm dam storage information as part of the dam permit system and has collected additional information for old existing dams opportunistically.</p> <p>Dams with a status of 'existing', 'proposed' or 'current' have been selected from the database and major town supplies, hydro storages, commercial, industrial and mining dams have been excluded from display on the map. The data has been intersected with sub-catchment units to give a relative indication of the distribution of farm storage capacity within the region.</p> <p>Storage megalitres (ML) have been grouped into 5 classes. It is important to note that this information is indicative only and any large non-farm water storages were excluded.</p>
