MAP 5 - VEGETATION GROUPS FOR THE FURNEAUX SUB REGION

NAME  VEGETATION GROUPS FOR THE FURNEAUX SUB REGION  TASVEG v1.3 (DPIW, 2007), Provisional TASVEG 2005 (DPIW, 2008).  Description and Uses Summary  This map shows broad vegetation communities in TASVEG v.1.3.  The following has been extracted from the TASVEG v.1.3 metadata document:  TASVEG is a Tasmania-wide vegetation map, produced by the Tasmaniar Vegetation Monitoring and Mapping Program (TVMMP). The TVMMP classifies 154 distinct vegetation communities to produce TASVEG at a scale of 1:25,000. The TASVEG mapping builds on and incorporates the Regional Forest Agreement (RFA) mapping of forest vegetation communities as well as the World Heritage Area (WHA) mapping that was carried out at 1:25,000 scale.  Some of the major updates to TASVEG v1.3 (from v1.2) include: Plantation Update Project 06, Grassland Mapping (Integration of remapping of some grasslands within NRM North), Eamygdalina Project 06-05 and 04-05 Plantation Integration.  The figures below have been calculated from Provisional TASVEG 2005 (reporting purposes, Provisional TASVEG 2005 provides a time stamped vegetation baseline).  The following has been adapted from the Provisional TASVEG 2005 metadata document:  Provisional_TASVEG_2005 is a provisional state-wide digital layer indicating the extent of native, non-native and non-vegetation as at 2005. It is a combination of the output of the Monitoring Vegetation Extent Project (MVEP) and the most

metadata document:  Provisional_TASVEG_2005 is a provisional state-wide digital layer indicating the extent of native, non-native and non-vegetation as at 2005. It is a combination of the output of the Monitoring Vegetation Extent Project (MVEP) and the most
extent of native, non-native and non-vegetation as at 2005. It is a combination of the output of the Monitoring Vegetation Extent Project (MVEP) and the most
recent version of TASVEG (TASVEG v1_3). The MVEP produced as an output, a layer of vegetation change polygon across the State from the time of TASVEG mapping until 2005. These have been integrated into TASVEG v1.3 to produce an updated / time-stamped layer that can be used as a baseline to improve reporting capabilities for vegetation indicators. For further information please contact the TVMMP, ph 6233 4501.
Notes on calculations: The following TASVEG codes have been used to categorise the data - Plantations: FPL, FPU, Agricultural & Exotic Vegetation: FAG, FMG, FPE, FPF, FRG, FSM, FWU, Urban, mining quarries etc: FUM, FUR, Water rocks, sand, mud etc: OAQ, ORO, OSM Native veg: (all other codes). Provisional TASVEG 2005 coastline has been used for the calculations (Provisional TASVEG 2005 does not include some of the smaller islands around Flinders Island, which is why the total area will differ from Map 1).
Table/s
Broad Land Cover Classes for the Furneaux Sub Region (derived
from Provisional TASVEG 2005) Land Cover Class Area (Ha) % of Total
Native vegetation 138,400 71
Agricultural & exotic vegetation 50,700 26
Plantations 400 0
Urban, mining quarries etc 300 0 Water rocks, sand, mud etc 6,400 3
Total 196,200
