

**MAP 7 - INDICATIVE WEED COVER BY SUB-CATCHMENT UNIT FOR
THE NORTHERN NRM REGION**

NRM North Map Description	
NAME	INDICATIVE WEED COVER BY SUB-CATCHMENT UNIT FOR THE NORTHERN NRM REGION
Date Source/s	TASVEG v.1.3 (DPIW, 2007)
Description and Uses Summary	<p>This map indicates the percentage of weed infestation as a proportion of total sub catchment area. TASVEG code 'FWU' has been selected from TASVEG v.1.3 and used for the calculations. FWU represents mapped visible weeds and will not capture weeds under forest canopies or masked by other native vegetation types.</p> <p>This weed map is indicative only, as only visible woody weeds in the agricultural / settled landscapes have been captured. These include willow, gorse, hawthorn and boxthorn. There are economic and environmental impacts associated with all of these species. This data can provide a useful indication of the relative significance of weed issues in the landscape.</p> <p>Partial sub-catchment areas on the boundary of the NRM region with less than 30% of their area within the region have been excluded from the analysis.</p>
